

Shashi Gowda

Software Engineering ★ Product Design ★ AI

I am a craftsman who loves building beautiful products and is thrilled by hard technical and design challenges. I am a generalist hacker with deep expertise in some fields: **programming abstractions & language design, AI & ML, web and UX development, and performance engineering.**

I have a **PhD in computational science from MIT** where I worked on **industry-leading modeling software**, and have worked in the software **industry for over 4+ years**. I'm currently **excited** about the raw material of **LLMs, Agentic automation** and **RAG models**.

I'm looking to join a down to earth team building something they love and obsessing over user success.

Education

Massachusetts Institute of Technology

2018 Sep – 2024 May

Ph. D in Computational Engineering and Mathematics

Thesis: Symbolic-numeric programming in scientific computing

Advisor: Prof. Alan Edelman **GPA: 4.7/5**

Natioinal Institute of Technology Karnataka

2010 Aug – 2014 Apr

B. Tech in Information Technology

CGPA: 8.06/10

Work Experience

Sailplane PBC

2024 Aug – 2025 May

Senior AI Engineer

Developed a hierarchical planning agent with Google Brain and Cloud veterans with high rate of success and reliability. My role: agentic AI dev, product design and engineering. Built the version pivotal to the SAFE round from a highly famous investor.

Skills honed: LLM & RAG, agents, Gen UI, Product Dev, Elixir, JS

Massachusetts Institute of Technology

2018 – 2024

Graduate Research Assistant

Built tooling for differentiable programming and scientific computing. My thesis project **Symbolics.jl**, is a symbolic programming platform used as the lingua-franca of the **Scientific Machine Learning ecosystem** in Julia, allows domain experts to write high performance domain specific languages without compiler expertise.

Currently used by **70+ dependent projects**.

Skills honed: Programming Languages, Numerical Computing, Symbolic Systems, Compiler design, Program analysis, Performance Engineering, Julia, Scheme

JuliaHub Inc

2016 Sep – 2018 Aug

Principal Software Engineer

Built a high-performance, distributed analytical database, IndexedTables, achieving **1.5-10x** query and indexing performance compared to pandas on various benchmarks. Built distributed indexed tables (now part of larger ecosystem) with performance comparable to Spark. Lead custom client deployments.

Skills honed: Analytical DB dev, Extreme Performance, ML algorithms at scale, Distributed computing, Parser Generators

CSAIL, MIT

2014 Sep – 2016 Aug

Research Software Engineer

Built a distributed, out-of-core compute scheduler Dagger.jl used as a go-to parallel computing abstraction in the community.

Built a distributed array framework on top of it.

Built experimental UI frameworks for scientific computing users.

First tool to innovate a server-side virtual DOM (now prevalent in modern frameworks like Phoenix LiveView.)

Skills honed: Software Abstraction, High-performance Linear Algebra, Functional Programming, Distributed Computing, Metaprogramming, Productization and Developer Relations
